Standard and Special Steel Racks

PAUL MÜLLER

we make it transportable

Special rack for steering gears

Special trailer

Special rack for subframes

You have special requirements: **We have the right solution**

Our load carriers have established themselves in expert circles, primarily in the automotive industry. Customised, efficient and safe – this is how we have become a leading manufacturer in the field of transport packaging. Load carriers from Paul Müller have been setting benchmarks for many years. Especially where steel and plastic composites are concerned, we are pioneers of the industry.

At our facilities in Balve and Nordhausen, we work with a wide range of different materials in various processes, drawing on more than 50 years of experience and utilising the know-how of our own product design, mould-making and prototyping departments. This enables us to optimise our coordination with customers' needs and wishes already at an early project stage, save valuable time and ensure the necessary safety standards.

Tube laser technology

Flat-bed laser technology

Machining centre

Powder coating

Measurement engineering

This is how we define flexibility

We invariably demand high quality standards of ourselves and meet our customers' demands.

Thanks to our outstanding technical standards, we have no problems with processing your data from a great variety of CAD systems.

Consistent CAD/CAM technology helps us to fulfil your wishes all the way from product development to the finished end product.

Optimal conditions

State-of-the-art manufacturing equipment ensures consistent, high quality standards in production.

We also have latest machine tools, powder coating machines and innovative laser technologies at our disposal.

With our coordinate measuring machines we reach a degree of precision which meets the high standards required for automatic loading and unloading of load carriers.
