PM Tugger Train System

PAUL MÜLLER
we make it transportable

It is your time to move. **Our Tugger Train System will help you.**

There are many Tugger Train Systems out there today, but only one is as unique as the Paul Müller System. The system can attach to any kind of tractor. This versatility is what makes our system the best on the market. For you, it means high efficiency in material flow and less vehicle traffic. Another advantage is the ability to connect up to six shuttles at once. Each Shuttle can be equipped with a variety of different trolleys.

These unique features make you as flexible as our system. Designed by Paul Müller, a real innovation on the market.

Easy handling

Easy Handling

Easy, strong and reliable is the character of our system. The simple effective design allows the system to function with no external power – No pneumatics, hydraulics or electricity required. The angle of the rollers allows the trolley to be easily lifted into the Shuttle.

This keeps the mechanics very simple. Our system can easily be used with your existing tractors by simply adapting the connector and drawbar. This helps to avoid big investments.

High Quality, Low Maintenance

There is no possibility of having air or hydraulic leaks which compromise the functionality of the Paul Müller Tugger Train System.

ADVANTAGES OF THE PAUL MUELLER TUGGER TRAIN SYSTEM:

- No additional power source
- Can be used with any tractor
- Easy to maintain
- The connector and drawbar can be adapted to the clients system
- The tight turning radius allows for extreme movability

TECHNICAL DATA:

Net weight of one shuttle:	139 kg
Payload:	600 kg
Length:	1440 mm
Width:	1210 mm
Maximum speed:	15 km/h
Turning radius:	< 4 m
